Christian Vargas-Polo

| Problem Type | Languages selected and why | What about the language made it easier? | What about the language made it hard? |
|---|---|---|---|
| Reporting | Java- reading from a file was somewhat easier in java for me | Reading from files was learned early on in java so it made this | Parsing the CSV file by a specific delimiter was giving me more troubles than I expected |
| Math Calculations | Java-I find doing math based questions more direct and explicit in java creating classes allowed me to store various parts of the data and manipulate within the class | I've solved conversion problems before in java, Whether it was dealing in the financial sector. | Parsing through big data files and getting an accurate read on each of the inputs. |
| Web Development | React.Js- calling to an api and parsing through the returned JSON to display to the screen is something i learned through an internship | I learned the in and out of fullstack development through an internship, being exposed to having websites dynamically change with a smooth front end has become familiar. | Hosting the Website on github pages while keeping my routes intact. Took me a few hours but i was able to get it running |
